

Date: 22.02.2022

Chair: Shashwat

Note taker: Borislav

Opening

Everyone is present

Points of action

1. Websockets – we have to implement with REST but we can use web sockets in addition
2. Assign issues for each sprint each sprint
3. Make issues that are less generic
4. Add tags(IN PROGRESS/ TESTING/...)
5. **Create proper sprint plan(TODAY)**
6. Weight in gitlab – it should reflect the time invested into the issue
7. Before each sprint have a polished plan(make the issues more clear/ proper name / explained)
8. Questions for the database – each person should make 3-5 questions
9. **Assign one person per issue before starting the sprint – preferably have one, but two is also fine**
10. **Only merge after pipeline is green**
11. Checkstyle – up to us to decide(at least 7)
12. Try to not assign more than one person per issue(shared responsibility)

Action points for next week (Scrum board)

1. Make reasonable plan for the week(what has been done/ what hasn't been done)
2. PUT/GET/DELETE/POST controller by next week

Questions for the TA

How to delegate the work – You can specialize between FRONT/BACK but you have to switch (by week 6 you will be told to switch)

Feedback

1. Make sure to send agenda before each meeting
2. For every merge request have tests for it (if you don't see tests/ask for them/ don't merge without them)
3. Comment on each others' code when merge requesting
4. Have dev branch merged into master before each lab
